EXPERIMENT 8

Create an infographic in Figma explaining the concept of Public Land Mobile Network (PLMN).

PLMN | Public Land Mobile Network

A PLMN is a mobile operator's network that provides cellular service to its subscribers.

↔ Communication in both directions Dashed = wireless radio Solid = network connection

1 Identify the subscriber

The SIM in each phone holds the subscriber identity used to access the network.

2 Connect by radio

The phone sends and receives radio signals through a nearby cell tower.

3 Manage the service

The core authenticates subscribers, routes traffic and manages mobility between cells.

THE BIG PICTURE SIM identifies. Phone communicates. Towers connect. Core manages.
